BUSINESS PLAN DOCUMENTATION

IndusLink

Industrial Supply & Rapid Delivery Platform

Business Name:	IndusLink – Industrial Supply & Rapid Delivery Platform
Business Location:	Pune, Maharashtra, India
Type of Business:	B2B Industrial Supply Chain / Logistics & Distribution
Academic Year:	2025–26
Course Outcome:	CO2 – Develop business strategies to foster business development

TEAM: INDUSLINK OPERATIONS

NAME	ROLL NO.	ROLE
Apoorv Mahesh Karhade	21142	Team Leader
Swara Sachin Deshpande	21123	Operations Lead

CONFIDENTIAL — FOR ACADEMIC SUBMISSION ONLY

1. BUSINESS OVERVIEW

Mission Statement

To minimize industrial downtime by ensuring fast, reliable, and accessible delivery of critical spare parts and industrial components to manufacturing facilities across India.

Vision Statement

To become India's most trusted industrial supply network — delivering essential mechanical and electrical components to factories within hours, not days, and transforming the way industries manage supply chain resilience.

Products & Services Offered

- Supply of industrial spare parts: bearings, motors, drive belts, sensors, valves, and electrical components
- Same-day and rapid delivery service for time-critical orders
- Inventory management solutions for partner manufacturing facilities
- Annual supply contracts with guaranteed availability and priority fulfilment
- Emergency breakdown support delivery for unplanned production stoppages

Business Objectives

Short-Term (0–6 Months)

- Establish a central warehouse and operational infrastructure in Pune's MIDC belt
- Onboard and serve a minimum of 20 manufacturing clients within the first 6 months
- Build a reliable vendor and supplier network covering 200+ SKUs

Long-Term (1–3 Years)

- Expand operations to major industrial hubs including Mumbai, Nashik, and Ahmedabad
- Develop a technology-enabled ordering and inventory management platform
- Scale to 150+ partner factories with multi-city warehouse coverage

2. EXECUTIVE SUMMARY

IndusLink is a B2B industrial supply and rapid delivery service purpose-built for the manufacturing sector. The business addresses a well-documented and costly pain point: unplanned machine downtime caused by the unavailability of spare parts and industrial components.

By maintaining a strategically stocked local warehouse and deploying a same-day delivery model, IndusLink enables factories to resume operations within hours of a breakdown — significantly reducing production losses and revenue impact.

- Primary market: Small and medium-sized manufacturing enterprises (SMEs) in Pune's industrial zones
- Core value proposition: Speed, reliability, and a single-source supply partner for critical components
- Revenue streams: Product margin, express delivery charges, and long-term annual supply contracts
- Cost savings delivered: Reduction in unplanned downtime translates to direct bottom-line impact for clients
- Scalability: Asset-light model with replicable warehouse-and-delivery framework for city-wide rollout
- Market opportunity: India's manufacturing sector contributes 17% of GDP — spare part supply remains highly fragmented

> *IndusLink is positioned as the operational backbone of industrial supply chains — a fast, dependable, and scalable procurement partner for manufacturers who cannot afford to wait.*

3. TEAM BUILDING & SHARED LEADERSHIP

Team Structure and Role Distribution

ROLE	CORE RESPONSIBILITIES
Team Leader	Strategic planning, coordination, stakeholder management, and decision-making authority
Operations Lead	Warehouse management, delivery logistics, fleet coordination, and SLA compliance
Supply Chain Lead	Vendor sourcing, supplier negotiations, inventory forecasting, and procurement management
Marketing Lead	Client acquisition, B2B partnerships, brand positioning, and revenue pipeline development

Shared Leadership Philosophy

- Cross-functional decision-making: all members contribute to key operational and strategic decisions
- Responsibilities are assigned based on domain expertise, with defined accountability per role
- Regular team syncs ensure alignment between supply chain, logistics, and client-facing functions
- Peer review of major deliverables to maintain quality standards across all business activities

Organizational Effectiveness

- Seamless coordination between procurement, warehousing, and last-mile delivery
- Shared ownership of client satisfaction KPIs and delivery performance metrics
- Culture of transparency, accountability, and continuous operational improvement

4. COLLABORATION TOOLS & OPERATIONAL TECHNIQUES

Team Collaboration Tools

TOOL	APPLICATION
Google Docs	Shared documentation, SOPs, and collaborative report drafting
Trello	Task management, sprint planning, and project progress tracking
MS Teams	Team meetings, video conferencing, and inter-department communication
WhatsApp	Real-time operational communication and rapid escalation
Microsoft Excel	Inventory management, order tracking, and financial modelling
GitHub	Version control for system tools and operational scripts (if applicable)

Platform Architecture

IndusLink operates through three integrated operational layers:

LAYER	FUNCTION
Customer Interface	Enables factories to place orders, track delivery status, and manage procurement history
Backend System	Manages real-time inventory tracking, order processing, and fulfilment workflows
Warehouse System	Controls physical storage, dispatch sequencing, and last-mile delivery coordination

Platform Stakeholders

STAKEHOLDER	ROLE IN THE ECOSYSTEM
Manufacturing Clients	Place orders for spare parts and industrial components as per operational need
Suppliers & Vendors	Provide a diverse inventory of components under negotiated commercial terms
IndusLink Operations	Manage end-to-end order processing, fulfilment, and customer relationship management

Core Platform Capabilities

- High-velocity order processing with minimal lead time from order placement to dispatch
- Real-time inventory visibility across warehouse and in-transit stock

- Priority fulfilment queue for emergency and breakdown orders
- Integrated vendor network for extended product range and demand elasticity
- End-to-end order tracking with delivery status notifications

Non-Functional Requirements

- Delivery SLA: 3–6 hours from order confirmation to client site delivery
- Inventory availability: Minimum 95% fulfilment rate for listed SKUs
- System uptime: Scalable and redundant warehouse operations
- Usability: Frictionless ordering process for non-technical factory procurement managers

5. CUSTOMER SEGMENTATION & TARGET MARKET

Primary Target Customer Segments

SEGMENT	PROFILE	PRIMARY PAIN POINT
Small-Scale Factories	Local manufacturing and fabrication units	No dedicated procurement team; urgent part shortages halt production
Medium Enterprises	High-volume production lines with shift operations	Machine downtime causes significant daily revenue loss
Repair Workshops	Maintenance and servicing operations	Frequent need for small quantities of specific components

Customer Pain Points & Needs

- Immediate availability: No tolerance for multi-day lead times during active production
- Supply reliability: Consistent availability of the same parts across repeat orders
- Downtime reduction: Every hour of stoppage carries measurable financial cost
- Pricing transparency: Fair margins with no hidden logistics surcharges
- Relationship-driven procurement: A single trusted partner rather than multiple fragmented vendors

Market Size Indicators

Pune hosts over 4,500 registered manufacturing units across sectors including automotive, engineering, electronics, and pharmaceuticals — representing a significant and underserved addressable market for rapid industrial supply services.

6. MARKETING AND SALES STRATEGY

Market Positioning

IndusLink is positioned as a high-reliability, fast-response industrial supply partner — not a generic distributor. The brand promise is grounded in speed of delivery, inventory depth, and operational dependability for manufacturing clients who cannot afford supply failures.

Go-To-Market Channels

CHANNEL	STRATEGY & EXECUTION
Direct Field Sales	Dedicated B2B sales visits to MIDC clusters, factory floors, and industrial estates in Pune
Digital Presence	Professional website with product catalogue, LinkedIn company page for industrial outreach
Referral Network	Incentivised referral programme for existing clients to recommend to peer factories
Industry Events	Participation in industrial trade fairs, manufacturer associations, and MSME forums
Supplier Partnerships	Co-marketing and referral agreements with component suppliers and distributors

Sales Strategy

- Direct B2B relationship selling — targeting procurement managers and plant heads
- Annual supply contracts providing pricing certainty and guaranteed availability
- Emergency delivery premium charged for same-day and after-hours fulfillment
- Pilot order programme allowing new clients to test reliability before committing to a contract

Revenue Model Summary

REVENUE STREAM	DETAILS
Product Margin	10–20% gross margin on all spare parts and industrial components supplied
Delivery Charges	₹200 – ₹1,000 per delivery; premium tier for express and emergency orders
Annual Contracts	Fixed-term supply agreements with guaranteed volume and pricing
Year 1 Sales Target	Minimum 20 manufacturing clients onboarded within the first 12 months

7. CUSTOMER SUPPORT & SERVICE EXCELLENCE

Customer retention in the industrial supply sector is driven primarily by responsiveness, reliability, and resolution speed. IndusLink's support framework is designed to reinforce these values at every client touchpoint.

- 24/7 order support via dedicated phone line and messaging platforms for breakdown emergencies
- Maximum 2-hour response SLA for all support escalations and order queries
- No-questions replacement policy for defective, damaged, or incorrect parts supplied
- Dedicated relationship managers assigned to annual contract clients
- Post-delivery feedback loop to identify service gaps and drive continuous improvement
- Periodic account review meetings for high-value clients to assess supply performance

8. PROJECT MANAGEMENT: PLANNING & EXECUTION

Launch Phase Timeline

ACTIVITY	OWNER	DURATION	KEY DELIVERABLE
Market Research & Demand Analysis	Marketing Lead	Week 1	Target client list and demand profile
Supplier Identification & Tie-ups	Supply Chain Lead	Weeks 2–3	Signed supplier agreements and SKU catalogue
Warehouse Setup & Stocking	Operations Lead	Weeks 3–5	Operational warehouse with 200+ SKUs in stock
Pilot Launch & Client Onboarding	All Members	Weeks 6–7	First 5 clients served and feedback collected

Ongoing Governance & Tracking

- Weekly cross-functional team meetings to review delivery KPIs and operational metrics
- Trello-based sprint planning with task ownership and deadline visibility
- Monthly financial review tracking revenue, cost, and profitability against targets
- Quarterly performance review with supplier partners to assess SLA compliance

9. BUSINESS REGULATIONS & ESTABLISHMENT REQUIREMENTS

Mandatory Registrations & Licences

REGULATORY REQUIREMENT	PURPOSE & RELEVANCE
MSME Registration	Enables access to government schemes, subsidies, and priority lending for small businesses
GST Registration	Mandatory for all B2B commercial transactions, invoicing, and inter-state supply operations
Shop & Establishment Licence	Required by Maharashtra local authority for operating a commercial warehouse facility
Trade Licence	Permits legal operation of storage, distribution, and logistics activities

Ongoing Compliance Obligations

- Accurate GST-compliant invoicing for all transactions and deliveries
- Formal vendor and supplier agreements with documented commercial terms and SLAs
- Proper goods movement documentation including e-way bills for inter-state supply
- Full compliance with Maharashtra Labour Act for warehouse and delivery staff employment
- Periodic filing of GST returns and maintenance of auditable financial records

10. FINANCIAL PLAN

Startup Investment Requirements

COST COMPONENT	AMOUNT (₹)
Initial Inventory Stock	3,00,000
Warehouse Rent (First Month)	1,00,000
Transport & Delivery Setup	1,50,000
Technology, Admin & Misc.	50,000
TOTAL STARTUP INVESTMENT	6,00,000

Monthly Operating Cost Structure

COST COMPONENT	MONTHLY AMOUNT (₹)
Warehouse Rent	50,000
Staff Salaries	1,00,000
Transport & Fuel	40,000
Miscellaneous	20,000
TOTAL MONTHLY OPEX	2,10,000

Revenue Projection

Operating assumption: 10 orders per day at an average profit of ₹1,000 per order.

METRIC	VALUE
Daily Revenue Contribution	₹10,000
Monthly Revenue	₹3,00,000
Monthly Operating Cost	₹2,10,000
Monthly Net Profit	₹90,000
Estimated Break-Even Period	6–8 Months

11. RISK ANALYSIS & CONTINGENCY PLANNING

Risk Register

RISK	POTENTIAL IMPACT	MITIGATION STRATEGY
Inventory Shortage	Inability to fulfil urgent client orders	Maintain 30-day buffer stock for top 50 high-demand SKUs
Delivery Delays	Client dissatisfaction and SLA breach	Multiple delivery routes; dedicated backup vehicle availability
Competitive Pressure	Price erosion and client attrition	Differentiate on speed, reliability, and relationship quality
Supplier Default	Stock disruption and order backlog	Dual-source strategy for all critical components
Cash Flow Constraints	Inability to restock inventory	Maintain working capital reserve; negotiate credit terms with suppliers

Contingency Measures

- Mandatory safety stock for high-velocity items to buffer against demand spikes
- Dual-sourcing policy for all critical component categories to eliminate single-supplier dependency
- Documented escalation protocols for delivery failures and client complaints
- Monthly risk review as standing agenda item in leadership meetings

12. FUTURE GROWTH PLAN & SCALING STRATEGY

Geographic Expansion Roadmap

- Year 2: Establish distribution hubs in Mumbai (Bhiwandi industrial belt) and Nashik (Satpur MIDC)
- Year 3: Enter Ahmedabad, Surat, and Hyderabad industrial corridors
- Replicate standardised warehouse-and-delivery model across new geographies

Service Portfolio Expansion

- Preventive maintenance support packages for annual contract clients
- Predictive supply system leveraging machine usage data and AI-driven demand forecasting
- Digital ordering portal enabling factories to manage procurement entirely online
- OEM partnerships for direct component supply from manufacturers

Scaling Infrastructure

- Multi-city warehouse network with centralised inventory management software
- Expanded supplier ecosystem covering 1,000+ SKUs across 15+ product categories
- Dedicated fleet with GPS-enabled real-time delivery tracking

3-Year Financial Projection

YEAR	ACTIVE CLIENTS	PROJECTED REVENUE	PROJECTED PROFIT
Year 1 (FY 2025–26)	20 Factories	₹36 Lakhs	₹10 Lakhs
Year 2 (FY 2026–27)	60 Factories	₹1 Crore	₹35 Lakhs
Year 3 (FY 2027–28)	150 Factories	₹3 Crore	₹1 Crore

13. CONCLUSION & FUTURE SCOPE

IndusLink addresses a persistent and high-cost operational challenge faced by India's manufacturing sector — the unavailability of critical spare parts during machine breakdowns. By combining strategic inventory management with a rapid delivery model, IndusLink delivers measurable value: reduced downtime, lower production losses, and a more resilient supply chain for its clients.

The business model is asset-efficient, scalable, and operationally replicable across India's major industrial corridors. Starting with a focused deployment in Pune's MIDC industrial belt, IndusLink is designed to grow systematically into a multi-city industrial supply network.

As India continues to accelerate its manufacturing capabilities under national initiatives such as Make in India and the Production Linked Incentive (PLI) scheme, the demand for fast, reliable, and localised industrial supply partners will only intensify. IndusLink is positioned to capitalise on this macro trend.

> *IndusLink is more than a spare parts supplier — it is a strategic operational partner for factories that cannot afford downtime. With a scalable model, a proven value proposition, and a growing industrial market, IndusLink is built for long-term impact.*
